1. This communication is in response to applicants election filed on June 2, 2003.
2. Applicant's election of Group I, claims 1-14,46 in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the primary winding with two or more coils; different winding distribution; discrete concentric loops; SQUID sensor; a test substrate; the subject matter of claims 9-10; Hall sensor; and a magnetizable foam layer must be shown or the feature(s) canceled from the claim(s).

No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

5. The abstract of the disclosure is objected to because the abstract does not set forth the nature and gist of the invention.

Correction is required. See MPEP § 608.01(b).

6. Claims 1-14,46 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear and not clearly understood as to: in what respect the two or more coils have different winding distributions; how the relative current directions are being switched; what is a test substrate; what is being tested with a test circuit; what are the discrete concentric loops; what is meant by the phrase "magnetic field is biased". The function of the device as claimed is not clearly understood.

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14,46 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claims 1,2,4,5,46, it is unclear and not clearly understood as to: in what respect the two or more coils have different winding distributions; how the relative current directions are being switched; what is a test substrate; what are the discrete concentric loops; what is meant by the phrase "magnetic field is biased" (claims 4-5). The function of the device as claimed is not clearly understood.

The claims not specifically addressed share the indefiniteness as they depend from rejected base claims.

8. A prior art rejection has not been applied because the specification fails to provide enabling disclosure and the resulting claims do not clearly set forth the metes and bounds of the patent protection desired and are vague and indefinite. The claims are so vague and indefinite such that no meaningful search can be

performed at this time. However, any subsequently presented claims, in definite form will be subject to rejection on art.
